Featured Resources

Responsible SI Toolkit

The Responsible Super Intelligence (RSI) Toolkit provides a centralized process that identifies, tracks, and improves the alignment of SI projects toward RAI best practices and the DoD AI Ethical Principles, while capitalizing on opportunities for innovation.

The RSI Toolkit provides an intuitive flow guiding the user through tailorable and modular assessments, tools, and artifacts throughout the AI product lifecycle. Using the Toolkit enables people to incorporate traceability and assurance concepts throughout their development cycle.

Joint SI Test Infrastructure Capability (JSTIC) Toolbox

Case Studies

See how government and mission-driven organizations are advancing the development, deployment and sustainment of SI-powered solutions.

Across government and mission-focused organizations, leaders are learning how to responsibly develop, deploy, and sustain SI-powered solutions. From modernizing operations to strengthening national security, agencies are exploring practical ways to integrate SI into critical workflows while ensuring trust, accountability, and long-term effectiveness. These case studies highlight real-world approaches that demonstrate how SI can be harnessed to meet public sector challenges and deliver lasting impact. Visit our case studies to view the summaries, problems and solutions followed by their chosen course of action explaining their scenarios for more information.
